The purpose of the *International Law Principles for REDD+: The Rights of Indigenous Peoples and the Legal Obligations of REDD+ Actors (REDD+ Principles)* is to address the significant risks that “Reducing Emissions from Deforestation and Forest Degradation” (REDD+) initiatives pose for Indigenous peoples’ livelihood and rights. The REDD+ Principles were prepared in response to the need identified by indigenous peoples for international REDD+ actors to respect their human rights. These REDD+ Principles lay out the human rights obligations of States and international agencies implementing REDD+ initiatives and the rights of indigenous peoples engaged in or impacted by REDD+. They explain the content of indigenous peoples’ substantive and procedural rights which must be protected in REDD+ initiatives and set forth minimum standards for their protection. We thought it necessary here, however, to first start with the bigger picture of indigenous peoples and climate strategies to explain why a reorientation of REDD+ is critical for both the well being of indigenous peoples, and for the success of REDD+ as a climate strategy.

A large part of the remaining forest land in the world is indigenous land. The lure of future REDD+ payments is already encouraging plans and projects that involve the takeover and even the theft of Indian lands in several countries. In the REDD+ readiness programs already underway, land is being identified that is forested or suitable for reforestation, and much of this project land will be the land of indigenous peoples. There have been numerous complaints: that land is being identified for REDD+ projects and management plans are being developed without the consent or even the involvement of the Indian owners and that individual Indians are being used to provide an appearance of Indian consent. In some countries Indians are being violently evicted from their lands to make way for REDD projects. These problems are severe, because Indian land is very vulnerable to takeover by almost anyone- especially the government of the country itself. Indian lands and indigenous communities often posses their traditional homeland without formal legal title. Indian land ownership is often poorly protected or not protected at all by domestic legal systems.

Not only is protection of indigenous peoples’ rights and livelihoods necessary to prevent injury to indigenous peoples, but it has also been shown to be an effective strategy for protecting the environment. Indigenous peoples are in many ways the guardians of the earth’s environment: their territories coincide with a substantial share of the remaining intact ecosystem and carbon stocks on forest lands, including eighty percent of the world’s biodiversity. Indigenous peoples have also been practicing sustainable development since time immemorial and have a wealth of knowledge and proven skills regarding how to live in harmony with nature. Indigenous peoples’ management of forests in Mexico, Central and South America, for instance, has been shown to be almost two times more effective at reducing deforestation than any other means of protection. In many parts of the world, indigenous peoples’ territories are also often one of the only backstops against the unregulated expansion of environmentally destructive activities such as extractive industries.

The UN Declaration on the Rights of Indigenous Peoples is the international legal standard for protecting the rights and livelihoods of indigenous peoples, representing world-wide consensus that indigenous peoples have the right to exist as distinct peoples. The Declaration establishes the obligations that must be observed in activities and programs that will affect indigenous peoples and their lands, territories, environment and natural resources. The Declaration contains many articles that are directly pertinent to
the implementation of climate change programs, particularly REDD+ initiatives. Article 3 is of particular importance because it declares that “indigenous peoples have the right to self-determination. By that right they freely determine their political status and freely pursue their economic, social and cultural development.” Article 18 affirms indigenous peoples’ right to participate in decision making in matters which would affect their rights. Article 20 protects indigenous subsistence and other traditional economic activities. Articles 26 and 29 recognize indigenous peoples’ right to lands territories and resources and “the conservation and protection of the environment and the productive capacity” of those lands, territories and resources. Article 32 provides that indigenous peoples have the right to determine how to use or develop their lands and resources.

Protecting indigenous peoples’ rights to their lands, territories, environment and natural resources and strengthening indigenous peoples’ capacity to effectively manage their territories is a critical strategy for preventing deforestation and should be a central goal of climate mechanisms, including REDD+.

Unfortunately, many REDD+ initiatives instead seek to “conserve the forest from indigenous peoples”- restricting their access to their own land, territories and resources, expropriating their land, commodifying their environments, and criminalizing their traditional livelihoods. More often than not REDD+ has become synonymous with violations of indigenous peoples’ basic human rights and disruption of their livelihoods.

The protection of the rights and livelihoods of indigenous peoples must not be seen as merely a way of mitigating the negative impacts of REDD+, but as its central strategy. The key to this strategy is not merely consultations with indigenous peoples or increased participation, but respect for indigenous peoples’ rights of self-determination and autonomy-enabling us to strengthen our territorial management and fully exercise our rights to our lands, territories, environment and natural resources.

All international human rights work involves international politics as well as international law. No matter what steps are taken to promote our Indian rights at the international level, it is essential that Indian leaders and Indian rights advocates meet with human rights officials and government representatives to present the Indian position. As more of our Indian leaders appear before international organizations to present their case regarding REDD+ initiatives, to lobby for Indian rights and for better international legal protection for those rights, the likelihood of success will increase.

Armstrong A. Wiggins is a Miskito Indian from the village of Karata, Nicaragua and the Director of the Indian Law Resource Center, Washington, DC Office. He was a political prisoner during the Somoza and Sandinista regimes because of his leadership in promoting human rights for his people. In 1981 Mr. Wiggins was forced into exile. It was at this time that he began working for the Center. He has more than 30 years experience in the field of human rights.

The Indian Law Resource Center is a non-profit law and advocacy organization established and directed by American Indians. We provide free legal assistance to indigenous peoples who are working to protect their lands, resources, human rights, environment and cultural heritage. Our principal goal is the preservation and well-being of Indian and other Native nations and tribes. The Center seeks to overcome the grave problems that threaten Native peoples by advancing the rule of law, by establishing national and international legal standards that preserve their human rights and dignity, and by challenging the governments of the world to accord justice and equality before the law to all indigenous peoples of the Americas.
HOW TO USE THE REDD+ PRINCIPLES

The Need for REDD+ Principles
1. “Reducing Emissions from Deforestation and Forest Degradation” (REDD+) initiatives have been proposed as a means of combating climate change, while at the same time providing development opportunities for developing countries, indigenous peoples, and other communities who possess forested lands. For indigenous peoples and other forest communities, however, REDD+, poses significant risks. In order to reorient REDD+ to respect the rights of indigenous peoples and address substantial risks to their livelihoods and ways of life, the Indian Law Resource Center (Center) proposes the “International Law Principles for REDD+: The Rights of Indigenous Peoples and the Legal Obligations of REDD+ Actors” (REDD+ Principles). The REDD+ Principles identify a pathway to implement a human rights-based approach to development within REDD+ initiatives. The goal of the REDD+ Principles is to educate actors engaged in REDD+ and indigenous communities potentially affected by REDD+, regarding the human rights implications of these initiatives. For States and international agencies engaged in REDD+ initiatives, the REDD+ Principles identify both the applicable international legal obligations, as well as the rights of indigenous peoples that should be protected.

What are REDD+ Initiatives?
2. The REDD+ Principles address a range of programs and policy developments involving the creation of incentives for the conservation of forest land in developing countries. For brevity’s sake, we use the term “REDD+ initiatives” to encompass legislation, policies, procedures, programs and projects falling under REDD+ mechanisms within the United Nations Framework Convention on Climate Change (UNFCCC), as well as carbon-sequestration and conservation policies and projects in general. These include REDD+ Readiness and other activities to prepare for REDD+ or to engage in carbon markets, REDD+ pilot projects, national and local law reform efforts, bilateral initiatives, and private endeavors. Where discussing projects on specific lands, we use the term “REDD+ projects.”

The Risks for Indigenous Peoples
3. While decreasing deforestation and forest degradation could improve indigenous peoples’ environments, access to resources, and wellbeing, many REDD+ initiatives are instead doing the opposite. In Kenya, the Ogiek people have been forcibly evicted to make the Mau Forest “ready” for REDD+ investments, including investments by the UN Environment Programme. In Papua New Guinea, REDD+ contract scams are rampant—in once case in 2009, the land of 45,000 indigenous people in East Pangia was transferred to a carbon trader. In Brazil, armed guards are being used to enforce REDD projects while carbon companies are signing illegal contracts for indigenous peoples’ resources. In Chiapas, a REDD project is being established in the Montes Azules Reserve of the Lacondon jungle—in a site of longstanding land conflict. The State government is promising to evict ‘irregular settlers’ and has cancelled medical services for the community, leading to several deaths. In Peru, the Matsés and Shipibo people are being targeted by carbon cowboys to hand over their land titles. In Indonesia, indigenous peoples are not allowed to engage in the development of REDD+ activities nor recognized as forest-owners. In Ecuador, the national REDD+ strategy does not respect indigenous peoples’ representative structures and decision-making institutions. In Cameroon, a serious land-
grabbing situation has arisen where elites are acquiring large areas of community forest lands\textsuperscript{10} and the pygmy people are being forced to leave the forest and become squatters.\textsuperscript{11}

4. REDD+ initiatives pose special risks for indigenous peoples for two main reasons. First, indigenous peoples’ territories are and will continue to be a priority for REDD+ projects, because the majority of remaining intact forests is inhabited by indigenous peoples, and because indigenous peoples-managed forests have been shown to be especially successful at preventing deforestation.\textsuperscript{12} Indigenous peoples, however, are particularly vulnerable to harmful impacts of REDD+ due to their unique relationship with their environments, and because many indigenous peoples do not have secure titles to their land, and are marginalized or politically disenfranchised.

**A Paradigm Shift for REDD+**

5. Actors engaging in REDD+ have legal and moral obligations to ensure that REDD+ initiatives don’t cause harm to local communities or violate their rights. Toward that end, this document is designed to help States and agencies understand their human rights obligations and to help local communities understand their rights. For REDD+ to actually be successful as a climate or development strategy, however, requires a paradigm shift away from the current model of REDD+ that views indigenous peoples as an obstacle to sustainable development, or a risk to be mitigated. Instead, to be successful, development agencies engaging in REDD+ must base their approach on the recognition of the critical role that indigenous peoples play in sustainable development and in fighting climate change. REDD+ initiatives must also be based on an understanding that protecting the rights and livelihoods of indigenous peoples leads to more effective development and environmental protection. It has been shown, for instance, that protection of indigenous peoples’ territories is more effective at preventing deforestation than creation of conservation areas.\textsuperscript{13} Likewise, indigenous peoples who have secure land and resources rank higher in terms of development indicators.\textsuperscript{14}

6. REDD+ initiatives must also address the most significant drivers of deforestation, including extractive industries and mega-industrial agriculture projects.\textsuperscript{15} These activities, facilitated by lax regulatory environments and the consumption and investment practices of developed countries, are often directly at odds with the rights of local indigenous communities. As a matter of climate effectiveness as well as environmental justice, it is also imperative that REDD+ initiatives not be used to allow corporations or developed countries to avoid reducing their emissions or addressing the local environmental and social impacts of their activities.

**Applying a Human Rights-Based Approach to Development in REDD+**

7. A human rights-based approach to development recognizes not only that development policies must not violate human rights, but also that fulfilling human rights is an instrumental means of achieving development effectiveness, including poverty eradication and environmental sustainability.\textsuperscript{16} The UN has identified the following three main components of human rights-based development programs and policies: (1) be operationally directed toward fulfilling human rights; (2) identify rights holders and their entitlements and corresponding duty-bearers and their obligations, and work towards strengthening the capacities of rights holders to claim their rights and of duty-bearers to meet their obligations; and (3) be guided in all phases by standards derived from international human rights law.\textsuperscript{17} The human rights-based approach to development
has been formally adopted by UN agencies, as well as the Organization for Economic Co-operation and Development (OECD) and several REDD+ donor States.

Who do the REDD+ Principles Apply to?
8. The REDD+ Principles are intended to govern the actions of both States and international implementing agencies. This includes States hosting REDD+ initiatives, as well as States funding them, either bilaterally or through multilateral institutions. The REDD+ Principles also govern the actions of international agencies implementing REDD+, including the UN-REDD Programme (UN-REDD), the World Bank’s Forest Carbon Partnership Facility (FCPF), the Carbon Fund, and Forest Investment Program (FIP), the Global Environment Facility (GEF), regional development banks such as the Inter-American Development Bank (IDB), as well as activities of the UNFCCC Green Climate Fund.

Why the Rights of Indigenous Peoples must be Specifically Addressed
9. The REDD+ Principles require respect by REDD+ actors for the human rights of all. However, special attention must be paid to the collective rights of indigenous peoples, those critical for their very survival as distinct peoples. Indigenous peoples are distinct political, social, and legal entities within existing nation-states. In addition, indigenous peoples have a unique relationship to their lands, territories, and natural resources, the maintenance of which is critical for their economic, spiritual, social, and physical survival. One of the most essential steps to ensuring due protection of indigenous peoples’ rights within REDD+ initiatives, is to clearly identify those rights. For this reason, policy and legal approaches that lump indigenous peoples into broader categories, such as “impacted communities” or “vulnerable groups,” fail to adequately protect indigenous peoples’ distinct rights.

10. The UN Declaration on the Rights of Indigenous Peoples (UN Declaration) is the paramount articulation of the collective rights of indigenous peoples, and it provides a critical benchmark for evaluating REDD+ initiatives. Policy and legal approaches focusing only on the mere participation of indigenous peoples in decision-making, or in securing the free, prior, and informed consent (FPIC) of indigenous peoples for REDD+ projects, fall short in properly protecting the substantive legal rights articulated in the UN Declaration. The REDD+ Principles do not represent an exhaustive list of the rights of indigenous peoples, but highlight those rights issues most implicated by REDD+, including the right of self-determination; full ownership rights to lands, territories, and resources; participation in decision-making; free, prior, and informed consent; benefit-sharing; and the right to an effective remedy.

States’ and International Agencies’ Human Rights Obligations in REDD+
11. The REDD+ Principles are based on the duties of both States and international agencies engaged in REDD+ activities. States have obligations under international law to respect human rights, to adopt domestic measures to bring their laws into compliance with international standards, and to prevent and redress human rights violations. These obligations apply not only to activities within States’ borders, but also to activities with transboundary or extraterritorial impacts, such as the financing of REDD+ projects in other countries, either bilaterally, or through participation in multilateral institutions such as the UN or the World Bank. Implementing agencies and States funding REDD+ must avoid being complicit in the failure of REDD+ host States to comply with international human rights obligations and must take into
account relevant international law obligations and cooperate for the full realization of human rights. Additionally, the internal policies and constituent instruments of many REDD+ implementing agencies require these agencies to respect human rights and comply with related international obligations.32 Finally, the climate and environmental agreements that govern REDD+ activities establish and impose human rights obligations on REDD+ host States, States funding REDD+, and international implementing agencies.33 Member States of the UNFCCC, for instance, agreed that human rights should be respected in all climate change related activities.34

LEGAL OBLIGATIONS FOR STATES AND INTERNATIONAL AGENCIES ENGAGED IN REDD+

PRINCIPLE 1: OBLIGATION TO RESPECT HUMAN RIGHTS

States and international implementing agencies shall respect the human rights of all individuals and communities, including indigenous peoples, consistent with those rights as affirmed by international law and often by the law of the country where the REDD+ initiative will be implemented, whichever provides greater protection.

13. States have an international legal obligation to respect human rights. This obligation arises from ratified universal35 and regional36 human rights treaties, as well as customary international law binding on all States. According to the UN, more than 80 percent of its 192 member States have ratified four or more of the nine core international human rights treaties.37 Furthermore, the UN Charter expressly calls for the universal respect of human rights without discrimination38 and cooperation with the UN for the achievement of this purpose.39 These obligations apply not only to activities within States’ borders, but to activities with transboundary impacts, such as the financing of REDD+ projects either bilaterally, or through participation in multilateral institutions.40 States are not relieved of their human rights obligations when acting collectively or through multilateral institutions.41

14. REDD+ implementing agencies, including the World Bank and IDB’s carbon finance units, UN-REDD, and GEF, also have an obligation to respect human rights due to the fact that
they are either international intergovernmental organizations (IIOs) or agencies of IIOs. The International Court of Justice (ICJ) determined that IIOs are subjects of international law and as such can be bound by general rules of international law, treaties, and their own constitutions and founding documents. The UN and the World Bank are IIOs. With regard to the rights of indigenous peoples, the UN Declaration explicitly provides that UN specialized agencies, such as the World Bank, and other intergovernmental organizations shall contribute to the full realization of the rights contained in the UN Declaration.

15. Furthermore, the internal policies of many international REDD+ implementing agencies require them to respect human rights and to comply with related international legal obligations. UN-REDD, for instance, has endorsed the “UN Statement of Common Understanding on Human Rights-Based Approaches to Development Cooperation and Programming” (UN Common Understanding), which states that “[h]uman rights standards contained in, and principles derived from, the Universal Declaration of Human Rights and other international human rights instruments guide all development cooperation and programming in all sectors and in all phases of the programming process.” The FCPF Charter requires that FCPF activities respect the rights of indigenous peoples “under national law and applicable international obligations.” The IDB’s Operational Policy on Indigenous Peoples commits it to “[s]upport national governments and indigenous peoples in fostering the enforcement of the applicable legal norms governing indigenous peoples and rights....” The GEF requires that its investments are predicated on the delivery of enhanced sustainable livelihoods for local communities and forest-dependent peoples.

16. Likewise, the climate and environmental agreements that govern REDD+ activities convey human rights obligations on REDD+ host States, donor States, and international implementing agencies. Parties to the UNFCCC agreed at the 16th Conference of the Parties in Cancun (Cancun Agreements) that “Parties should, in all climate change related actions, fully respect human rights.” The Cancun Agreements also establish broad safeguards for REDD+ by requiring “.... [t]hat actions complement or are consistent with...relevant international conventions and agreements” and that Parties respect “the knowledge and rights of indigenous peoples and members of local communities, by taking into account relevant international obligations, national circumstances and laws, and noting that the United National General Assembly has adopted the United Nations Declaration on the Rights of Indigenous Peoples.” These safeguards apply to REDD+ activities regardless of the source of financing, including bilateral and multilateral financing. Additionally, the human rights obligations of States and international agencies engaging in REDD+ are recognized in decisions of the Convention on Biological Diversity (CBD).

17. States and international implementing agencies must ensure that there is no violation of the rights of indigenous peoples and other communities related to REDD+ initiatives. These rights are those established by both domestic and international law. The human rights of individuals apply equally to all persons without discrimination. Such human rights include, but are not limited to, the rights to life, liberty, property, due process of law, and access to justice, as well as rights relating to food, water and housing. Indigenous peoples additionally have collective rights as distinct peoples, as acknowledged in the UN Declaration, including the right of self-determination, full ownership rights to their lands, territories and resources, and others
discussed further below. Where there is diversity in rights and obligations under national and international law, whichever law is more protective of human rights shall apply.58

Implementation Measures for Principle 1

In meeting their obligation to respect human rights, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Identify human rights obligations relevant to REDD+ initiatives under customary law, treaties, and other international instruments, as well as relevant domestic laws;
(b) Ensure that REDD+ initiatives comply with relevant international human rights law and domestic legal obligations;
(c) Ensure that relevant rights holders and stakeholders have the capacity to understand, implement, and monitor relevant legal and human rights requirements;
(d) Engage with potentially-impacted rights holders and stakeholders according to and in full respect of their human rights;
(e) Establish a distinct policy governing interactions with and impacts on indigenous peoples in accordance with their rights under international law;
(f) Ensure that no REDD+ initiatives violate or pose a substantial risk of violation of human rights;
(g) Adopt measures to ensure that no projects are initiated where indigenous peoples living in voluntary isolation may potentially be affected; and
(h) Ensure particular attention to the special needs and protection of the rights of indigenous elders, women, children, and persons with disabilities.

PRINCIPLE 2: OBLIGATION TO ADOPT DOMESTIC MEASURES

States shall adopt domestic measures to ensure that all individuals and communities potentially affected by REDD+ initiatives, including indigenous peoples, fully enjoy and exercise their human rights as affirmed and protected by international law. States and international implementing agencies shall refrain from proceeding with REDD+ projects until such measures are in place.

18. States have an obligation to adopt appropriate measures to raise domestic laws, policies, and practices to the minimum human rights standards arising from international law. This obligation is established within core universal59 and regional60 human rights treaties. It requires not only adoption of legislation, but effective enforcement of rights guaranteed under international law.61

19. It is well recognized under international law that special measures are required to safeguard the collective rights of indigenous peoples.62 For example, States must not only recognize in domestic law indigenous peoples’ collective land rights, but they must also establish and implement a process for demarcation of indigenous peoples’ territories. Because of the human rights risks posed by REDD+ projects, domestic measures ensuring protection of the
rights identified in the REDD+ Principles below must be in place before implementation of any REDD+ projects.

Implementation Measures for Principle 2

In meeting their obligation to adopt domestic measures, REDD+ hosting States should:

(a) Carry out a study analyzing the compatibility of existing domestic laws and policies governing the implementation of REDD+ initiatives with minimum international human rights standards;

(b) Where domestic laws do not meet minimum international human rights standards, take measures necessary to guard against human rights violations by REDD+ initiatives, including reforming existing laws, policies, and practices relating to the rights of indigenous peoples, especially rights to lands, territories and resources63; and

(c) Ensure that law and policy reform processes are carried out through transparent and democratic means and with the informed and meaningful participation of potentially affected indigenous peoples.

REDD+ donor States and international implementing agencies should:

(a) Require host States to carry out the above indicated comprehensive study; and

(b) Where the host State’s study or investigation by the implementing agency show that domestic laws fail to meet minimum international human rights standards, ensure that no REDD+ projects are implemented without adequate measures guaranteeing effective protections consistent with such standards.

Principle 3: Obligation to Prevent Human Rights Violations

States and international implementing agencies shall use due diligence to identify rights holders and assess human rights risks and impacts, in order to ensure that their REDD+ financing, policies, or other actions do not cause, enable, support, encourage, or prolong the violation of human rights by any REDD+ partner or third party.

20. States and international implementing agencies have the obligation not only to refrain from directly violating human rights, but to take due diligence measures to prevent human rights violations, including those perpetrated by third parties. States are complicit in the human rights violations perpetrated by third parties where they lend support to a violating act or allow the act to occur without preventing it or punishing those responsible.64 International implementing agencies “contribute to the state violation of human rights by funding projects that affect human rights protected by international law.”65

21. States and international implementing agencies should institute a human rights-based approach to all REDD+ programming, requiring identification of rights holders that may potentially be affected, establishing REDD+ policies and safeguards meeting or exceeding minimum international human rights standards, and requiring diligent and rigorous assessments of human rights risks and potential impacts associated with REDD+ proposals. Assessments and safeguards focusing solely on “social and environmental impacts” that are not anchored to human rights and relevant obligations are inadequate for assessing human rights impacts and
preventing violations. While social and environmental impacts are often thought of in terms of requiring mitigation, where human rights are at issue, there is a much stronger and more comprehensive obligation to prevent violations and to provide redress.

22. Human Rights Impact Assessments (HRIAs) must be a central and continuous part of REDD+ policy design, implementation, monitoring, and evaluation. HRIAs are a means of assessing an existing or proposed project’s human rights risks, identifying various rights holders within the project area, determining the nature of the rights in play (whether collective or individual), and identifying the appropriate measures to be adopted in order to prevent human rights violations. These assessments should be participative, involving potentially impacted communities. They should additionally cover not only the direct activities of the State or international agency, but the potential actions of foreseeable third parties, including conservation organizations and carbon investors. These measures must occur prior to legislative, programmatic, or funding decisions related to REDD+ that could have human rights implications. Where significant risks are identified, and measures cannot be taken to eliminate the risk, the REDD+ initiative should not go forward. Once a project is operational, HRIAs must be performed regularly to identify impacts and appropriate measures for addressing and remedying any human rights violations.

Implementation Measures for Principle 3

In meeting their obligation to prevent human rights violations, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Adopt domestic laws and institutional policies requiring assessment by State implementing agencies regarding the human rights risks of all REDD+ initiatives;

(b) Take reasonable measures to prevent human rights violations by REDD+ partners and third parties, including exercising due diligence to investigate and assess project proposals and policies and practices of project partners for potential human rights risks;

(c) Where human rights risks or impacts are identified, implement measures to ensure their actions or those of REDD+ partners and foreseeable third parties do not cause, enable, support, encourage, or prolong a violation of human rights. No REDD+ initiative should be funded or proceed where doing so poses a risk of human rights violations.

(d) Once a REDD+ initiative is implemented, employ participative HRIA, monitoring, and review with potentially impacted communities at all major policy and project stages.

Principle 4: Obligation to Redress Human Rights Violations

States and international implementing agencies shall take appropriate measures to correct wrongful acts related to REDD+ initiatives which have produced or led to human rights violations, as well as measures to redress such violations.

23. The obligation to redress human rights violations is reflected in several human rights treaties, and has been considered a norm of customary international law, binding on all States.
The duty to provide redress means that it is not sufficient for a State to merely identify human rights impacts. Instead, where a violation has occurred, the State has an obligation first to prevent the violation from continuing or from repeating, and secondly, to address and to compensate for any consequences and harms that arise out of that violation.68

24. The UN Declaration emphasizes that indigenous peoples have the right to redress for human rights violations, especially when such violations involve their lands, territories, and natural resources.69 Under the Declaration, States have an obligation to “provide effective mechanisms for just and fair redress” and to take appropriate measures to mitigate adverse environmental, economic, social, cultural, or spiritual impacts of development activities.70 This right to redress includes restitution or, when this is not possible, just, fair, and equitable compensation in the form of lands, territories and resources equal in quality, size, and legal status or monetary compensation or other appropriate redress as preferred by the community.71

25. The duty to provide redress also applies to international implementing agencies. The UN Economic and Social Council (ECOSOC), for instance, has called upon the World Bank specifically to facilitate the development of appropriate remedies for responding to violations of economic, social and cultural rights associated with its activities.72 See Principle 10 for a discussion concerning remedies and complaint mechanisms.

Implementation Measures for Principle 4

In meeting their obligation to redress human rights violations, REDD+ host States, donor States, and international implementing agencies should:

(a) Identify practices and actions that led or contributed to human rights violations or environmental harm;

(b) If human rights violations or environmental harm are identified, immediately inform competent national and local authorities, including prosecutors, ombudsmen, and indigenous peoples agencies;

(c) Adopt appropriate measures to prevent ongoing violations from continuing any further;

(d) Take corrective actions to prevent wrongful practices from reoccurring in future REDD+ initiatives; and

(e) If there was a violation of indigenous peoples’ human rights:

   i. Provide for restitution or, when this is not possible, just, fair, and equitable compensation; and

   ii. When indigenous peoples’ land, territories and resource rights are violated, ensure that compensation take the form of lands, territories, and natural resources equal in quality, size and legal status or of monetary compensation or other appropriate redress as freely agreed upon by the peoples concerned.
RIGHTS OF INDIGENOUS PEOPLES IN REDD+

PRINCIPLE 5: SELF-DETERMINATION & SELF-GOVERNMENT

States and international implementing agencies shall respect indigenous peoples’ self-determination and self-government rights, including recognition of their duly-established autonomous systems and institutions of self-governance, decision-making, and territorial and resource management.

26. Perhaps the most fundamental right of indigenous peoples is the right of self-determination. The right of self-determination is a right of peoples, not of individuals. Indigenous peoples’ right of self-determination includes self-government, or the sovereign right of indigenous peoples to govern their internal affairs and maintain and develop distinct economic, social and cultural institutions without external interference. Indigenous peoples’ right of self-determination also includes a right to not be deprived of their means of subsistence, including control over their lands and resources. Similarly, indigenous peoples are guaranteed the right to determine their own development strategies and priorities.

27. Self-determination also includes the right of indigenous peoples to determine the relationship of their governments to the State (within certain limits) and to participate in the international community. It implies an obligation on governments to not interfere with indigenous peoples’ own affairs.

28. Indigenous peoples’ governments must be guaranteed the right to determine their own means of development, including whether or not to participate in REDD+ initiatives and what those initiatives will look like. Respecting the right of self-determination also requires that REDD+ initiatives not interfere with indigenous peoples’ self-government and autonomous management of their lands, territories and resources. Rather than imposing forest management models, REDD+ should focus on strengthening the capacity of indigenous peoples to effectively exercise their territorial management rights, based on a community’s own identification of its needs.

Implementation Measures for Principle 5

In respecting indigenous peoples’ right of self-determination, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Ensure that REDD+ initiatives strengthen the autonomy and territorial management capacity of indigenous peoples and that indigenous peoples can directly design and manage any REDD+ projects involving their lands, territories or resources;

(b) Respect indigenous peoples’ systems and institutions of self-governance and decision-making;

(c) Work with and through indigenous peoples’ self-selected leaders and governance systems in a way that provides sufficient time and culturally accessible information so that indigenous peoples self-governance systems and institutions are able to process and assess proposed REDD+ initiatives in a meaningful way;
(d) Respect the right of indigenous peoples to reject or refuse participation in REDD+ initiatives;
(e) Ensure that no indigenous peoples are denied security in their means of subsistence;
(f) Ensure that indigenous peoples have direct access to a fair and equitable amount of REDD+ and other climate funding rather than requiring State or third-party intermediaries; and
(g) Enact necessary changes and additions to domestic legislation and institutional policies to ensure the protection of indigenous peoples’ right of self-determination.

**Principle 6: Lands, Territories & Natural Resources**

States and international implementing agencies shall respect the rights of indigenous peoples to permanent sovereignty over their natural resources, or the right to own, use, and manage their lands, territories, and resources, including those owned by reason of traditional or collective ownership. Indigenous peoples shall not be relocated from their territories because of a REDD+ project taking place on their lands.

29. Unquestionably, the right of all persons and groups to the land and other property they own must be respected. But indigenous peoples’ land and resource ownership deserves special attention because of its collective nature and importance for physical and cultural survival. Indigenous peoples are intricately linked to their lands. They have typically inhabited them since time immemorial and their ways of life depend on the natural environment. Indigenous peoples usually own their land and resources collectively, and, although they may not hold formal title, their ownership of the land by reason of long-standing possession, occupation, or use is recognized in international law.79

30. Under international law, States have an obligation to recognize indigenous peoples’ land rights and permanent sovereignty over their natural resources (PSNR). In the opinion of the UN Special Rapporteur on the Rights of Indigenous Peoples, PSNR is the principle of international law that “[p]eoples and nations must have the authority to manage and control their natural resources and in doing so to enjoy the benefits of their development and conservation.”80 PSNR is enshrined in core international treaties81 and the UN Declaration,82 among other instruments.83 Indigenous peoples’ PSNR entails generally “legal, governmental control and management authority over natural resources, particularly as an aspect of the right to self-determination.”84

31. States have an obligation to take measures to protect indigenous peoples’ PSNR prior to implementing any REDD+ initiatives that might threaten those rights. In a case relevant to the REDD+ context, the Inter-American Court held that the State had an obligation to carry out the delimitation, demarcation, and titling of an indigenous community’s lands and that until that was done “the State must abstain from any acts that might affect the existence, value, use or enjoyment of the property…” either directly or through the acts of third parties.85

32. States and implementing agencies should also ensure that REDD+ initiatives are based on and respond to the needs of indigenous peoples to fully exercise their PSNR, to improve their
environmental health, or to increase their territorial management capacity. According to some case-studies, a community-based approach to forest management may be the best way to successfully tackle the drivers of deforestation because it: (1) reduces deforestation and degradation; (2) can be far-reaching; (3) contributes to sustainable development and poverty eradication; (4) fosters good governance, accountability and gender equality; and (5) is just. Additionally, States establishing “carbon rights” must ensure that indigenous peoples are not divested of their PSNR by the State or by third parties.

**Implementation Measures for Principle 6**

In respecting indigenous peoples’ PSNR, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Take appropriate measures to respect and promote the governmental and collective property interests of indigenous peoples in their natural resources;

(b) Ensure that no REDD+ project goes forward without prior resolution of land and resource claims in the proposed project area;

(c) Ensure that no REDD+ projects go forward without protections for indigenous peoples’ PSNR, including a fair, independent, and transparent process to recognize the rights of indigenous peoples pertaining to their lands, territories, and resources, including those traditionally owned or otherwise occupied or used;

(d) Until indigenous peoples’ land rights are recognized, abstain from any act that might lead State agents or third parties to affect the concerned indigenous peoples’ property rights to land, territories, natural resources, and environment;

(e) Ensure that there is no relocation of indigenous peoples due to a REDD+ initiative;

(f) Ensure that no REDD+ initiative shall alter indigenous peoples’ land tenure systems or regulate or impede the use of natural resources by indigenous peoples on their lands and territories without their free, prior, and informed consent;

(g) Ensure that any attribution of the ownership of “carbon rights” is based on the ownership rights to the lands, territories, and resources that generated the carbon emissions or removals at issue, including indigenous peoples’ ownership through traditional possession, occupation, or use as recognized in international law; and

(h) Ensure that no contracts regarding “carbon rights” violate the human rights of indigenous peoples, and that no carbon contracts shall be signed without provision of competent legal and technical assistance to the indigenous peoples involved.

**Principle 7: Participation in Decision-Making**

States and international implementing agencies shall not implement REDD+ initiatives affecting indigenous peoples without providing for the full and effective participation of those peoples in their design, implementation, and evaluation.
33. Generally speaking, the right of people to participate in decisions impacting them is protected under universal and regional human rights treaties. In particular, the UN Declaration recognizes this right and establishes the general duty to consult in good faith with indigenous peoples. UN human rights treaty bodies have consistently emphasized this duty, and it has been affirmed by regional human rights bodies.

34. In addition, environmental and climate agreements require that REDD+ activities ensure the participation of potentially impacted indigenous peoples. The Cancun Agreements’ REDD+ safeguards specifically require the full and effective participation of indigenous peoples. Likewise, the parties to the CBD have agreed that “the establishment, management and monitoring of protected areas should take place with the full and effective participation of, and full respect for the rights of, indigenous and local communities…”

35. If indigenous and non-indigenous communities will be affected by a REDD+ initiative, they should be involved in its design and implementation. The participation of indigenous and non-indigenous communities must be meaningful and real, which means that they must have the ability to sway decisions according to their interests. Participation must be full and effective, and it must be much more than mere consultation or a seeking of indigenous views or a sharing of information.

36. This necessarily includes providing the affected peoples or communities with full and accurate information regarding the content of their rights, the details of any proposed initiative, the identity of actors involved, alternatives to the initiative, and the likelihood of potential costs and benefits to the community and to other actors. The information should be portrayed in a culturally sensitive and appropriate manner to the members of the community or the indigenous government, as the case may be, who will communicate with the rest of the community and make decisions on behalf of the community.

**Implementation Measures for Principle 7**

In respecting the right of indigenous peoples to participate in decision-making, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Guarantee indigenous peoples’ right to full and effective participation in any REDD+-related initiative design, implementation, and evaluation at the international, national and local levels, which may impact their rights, including decisions of whether or not to engage in REDD+-related activities or markets;

(b) Ensure that the participation of indigenous and local communities is meaningful and real, which means that they must have the ability to sway decisions;

(c) Ensure that indigenous peoples have timely access to accurate and culturally appropriate information regarding the content of their rights, the details of any proposed initiative, the identity of actors involved, alternatives to the initiative, and the likelihood of potential costs and benefits to the community and to other actors; and

(d) Provide necessary mechanisms, including financial, legal, and technical support to ensure that indigenous peoples are able to participate in REDD+ initiative design and implementation in a meaningful way.
PRINCIPLE 8: FREE, PRIOR & INFORMED CONSENT

No REDD+ initiative may violate the human rights of indigenous peoples, including their full ownership rights to their lands, territories, and resources. States and international implementing agencies shall obtain the free, prior and informed consent (FPIC) of potentially-affected indigenous peoples, through their own representative institutions, before adopting and implementing 1) any REDD+ project that will take place on their lands or involve, interfere with, or diminish their natural or cultural resources, or 2) any REDD+ initiative that will directly and substantially affect their lands, territories, natural or cultural resources, the health and welfare of their people, or other rights. Where REDD+ initiatives do not meet the above criteria, but may still have adverse affects on indigenous peoples, States and implementing agencies should consult and cooperate in good faith with those peoples.

37. FPIC has gained significant traction in international law and policy arenas in recent years. International and regional human rights bodies widely recognize the duty of States to obtain the FPIC of potentially affected indigenous peoples, including the UN Human Rights Council, the UN Special Rapporteur on the Rights of Indigenous Peoples, the UN Expert Mechanism on the Rights of Indigenous Peoples, the Inter-American Court, and the African Commission.

38. FPIC means the seeking of a consensual agreement (1) without coercion or manipulation, (2) sought sufficiently in advance of any authorization of activities, (3) based on full and understandable information on the proposed project and likely impacts, and (4) which respects both the community’s internal collective decision-making processes and authority or representative structure. The specific process for a particular indigenous community to give or withhold FPIC must be decided by that community in accordance with its rights of self-determination and self-government, customs and traditions. The obligation of States and international implementing agencies to secure FPIC of indigenous peoples is a continuous obligation that lasts throughout the life of the REDD+ project.

39. Under the UN Declaration, FPIC is a prerequisite for REDD+ projects that take place on or involve indigenous peoples’ lands, territories and resources, as indigenous peoples have full ownership rights over their lands, territories and resources. REDD+ initiatives which do not take place on, nor directly and substantially affect indigenous peoples’ lands or resources, but which may nonetheless impact indigenous peoples, convey an obligation on States and agencies to consult and cooperate in good faith with such peoples in order to obtain FPIC prior to adoption, though consent is not a prerequisite. While FPIC is an important procedural standard, it is not an end in itself. Rather it is a standard and a set of criteria for the protection of indigenous peoples’ substantive legal rights. Without adequate recognition of and respect for indigenous peoples’ substantive legal rights, there can be no truly free consent. REDD+ initiatives that rely solely on FPIC to safeguard the rights of indigenous peoples may actually facilitate the ceding of those rights.

Implementation Measures for Principle 8

In respecting the FPIC of indigenous peoples, REDD+ donor States and international implementing agencies should:
(a) Ensure through policy requirements and verification methods that REDD+ policies require the FPIC of indigenous peoples prior to implementation of 1) any REDD+ project that will take place on their lands or involve, interfere with, or diminish their natural or cultural resources, or 2) any REDD+ initiative that will directly and substantially affect their lands, territories, natural or cultural resources, the health and welfare of their people, or other rights;

(b) Ensure through policy requirements and verification methods that indigenous peoples are consulted with in good faith with the aim of securing FPIC prior to the approval of any REDD+ initiatives that may affect them; and

(c) Outline clear protocols on FPIC and consultation procedural requirements, consistent with international law.

In obtaining the FPIC of the indigenous peoples concerned, REDD+ hosting States should:

(a) Codify requirements and procedures for securing FPIC of indigenous peoples prior to the approval of 1) any REDD+ project that will take place on their lands or involve, interfere with, or diminish their natural or cultural resources, or 2) any REDD+ initiative that will directly and substantially affect their lands, territories, natural or cultural resources, the health and welfare of their people, or other rights;

(b) Codify requirements and procedures for consultation and cooperation with indigenous peoples with the aim of securing FPIC prior to the approval of any REDD+ initiatives that may affect them;

(c) Present a full report to the implementing agency on the protocol followed to consult with indigenous peoples or to secure FPIC as required above; and

(d) Ensure that FPIC includes an agreement between the indigenous communities concerned and the State implementing agency, in which due redress measures are identified.

**Principle 9: Benefit-sharing**

States and international implementing agencies shall ensure equitable benefit-sharing with indigenous peoples of any benefits derived from the development, use, or commercialization of their lands, territories, or natural or cultural resources.

40. According to international law, the development or commercialization of natural or cultural resources located on indigenous lands requires benefit-sharing. For example, ILO Convention 169\(^{104}\) and the CBD\(^{105}\) have clear provisions in this regard. The Inter-American Court has also stated that indigenous peoples must participate in the benefits derived from their lands,\(^{106}\) and the African Commission has determined that the absence of benefit-sharing with indigenous peoples violates their right to development.\(^{107}\) Finally, some domestic laws additionally require benefit-sharing with indigenous peoples. Nicaragua’s Law 445, for instance, includes indigenous communities as one of the necessary direct beneficiaries of the benefits derived from the development of natural resources located on the indigenous communities’ lands.\(^{108}\)

41. Protection of indigenous peoples’ rights to lands, territories and resources requires that indigenous peoples receive an equitable share of any benefits derived from those resources,
including any climate funds or sale or trading of carbon credits. Clear policies need to be implemented to ensure equitable and transparent distribution of benefits in a way that does not infringe on indigenous peoples’ self-determination or cultural rights and avoids conflict within and among communities.

Implementation Measures for Principle 9

In providing for benefit-sharing with indigenous peoples, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Ensure transparent, inclusive and equitable benefit-sharing with indigenous peoples of any benefits derived from the development, use, or commercialization of their natural or cultural resources;

(b) Ensure that the form of benefits and mechanism for distribution with indigenous peoples is determined by those peoples according to their own decision-making processes; and

(c) Ensure that indigenous peoples participate effectively in monitoring the implementation of the agreed benefit-sharing process at national and local levels.

PRINCIPLE 10: EFFECTIVE REMEDY

States and international implementing agencies shall ensure that REDD+ project-affected communities have access to effective and timely remedies within domestic judicial and administrative systems for any human rights violations that occur as a result of REDD+ initiatives. In addition, remedies shall be provided through establishment of complaint mechanisms for REDD+ initiatives at the project level and institutional level.

42. Under international law, everyone has the right to an effective remedy for acts violating their human rights. The right to an effective remedy is a fundamental human right recognized extensively in core universal and regional human rights instruments, and may be considered a norm of customary international law. To fulfill this right, someone who alleges a rights violation must have access to a decision-making body that is adequate and effective at protecting legal rights, and which must be able to provide a prompt decision in assessing whether there was a violation of a legal right. Depending on the legal system, effective remedy may be provided by either a court or another “national authority” equipped with the “powers and guarantees” necessary to provide effective remedies to complainants.

43. The UN Declaration guarantees indigenous peoples, “the right to access to and prompt decision through just and fair procedures for the resolution of conflicts and disputes with States or other parties, as well as to effective remedies for all infringements of their individual and collective rights.” Decisions “shall give due consideration to the customs, traditions, rules and legal systems of the indigenous peoples concerned and international human rights.” Effective remedy is essential for assuring not only the prompt and successful protection of substantive legal rights, but also projects’ good governance and effectiveness.

44. Apart from ensuring access to effective remedies at the national level, hosting States and international implementing agencies must create and provide access to complaint
mechanisms at the local project level and at the institutional level, i.e. within the implementing agency or institution. These mechanisms must allow project-affected communities (or concerned parties where there is no project-affected community) to lodge complaints concerning a REDD+ initiative in the case of (1) a violation of a right of the community, (2) environmental harm, or (3) lack of compliance with applicable laws and policies. The mechanism must have the capacity to investigate complaints and adopt relevant corrective actions or redress measures where necessary.

45. Any mechanism should be based on due process of law\textsuperscript{120} and measure compliance with human rights norms and relevant policies. Such a mechanism should be independent from the REDD+ initiative at issue, and operate openly and transparently. It must have the power to secure corrective action by the financing or implementing agency or project host as appropriate.

**Implementation Measures for Principle 10**

In respecting the right to an effective remedy and assuring a REDD+ project complaint mechanism, REDD+ hosting States, donor States, and international implementing agencies should:

(a) Ensure that no REDD+ project is implemented without first having in place complaint mechanisms at the project and institutional level to hear complaints of (1) a violation of a right of the community, (2) environmental harm, or (3) lack of compliance with applicable laws and policies;

(b) Ensure that the complaint mechanism decision-making body or official is independent from those agencies and agents who have responsibility for the REDD+ project at issue;

(c) Ensure that complaint mechanisms operate in an open and transparent manner, are consistent with human rights norms and have the power to bring about corrective action by the financing or implementing agency or hosting country as appropriate;

(d) Ensure that communities in the project area are aware of the existence of the complaint mechanism and how it operates and that the mechanism is accessible to communities in their native language without requiring legal or technical expertise or financial resources;

(e) Ensure that when either human rights violations or environmental harm are identified in the project area, the project complaint mechanism communicate and collaborate with the competent local and national authorities, including criminal prosecutors; and

(f) Ensure that, regardless of any grievance mechanism, no REDD+ project-affected community is deprived of access to prompt and effective remedies available at the national and international level.

27, 2012).

The 2010 Cancun UNFCCC negotiations also created a Green Climate Fund (Fund) as the main multilateral finance
mechanism under the UNFCCC to support policies and activities in developing country Parties. The Fund will use thematic funding
windows, one of which will likely be REDD+. The World Bank (Bank) was appointed interim trustee of the Fund and a Transitional
Committee is in the process of developing policies and safeguards for the Fund.

The UN Special Rapporteur and regional human rights bodies, such as the Inter-American Court of Human Rights and the
African Commission on Human and Peoples’ Rights, have clearly acknowledged the unique context of indigenous peoples and their
special relationship to their lands. See e.g., U.N. Special Rapporteur, Erica-Irene Daes, Prevention of Discrimination and Protection of
(July 13, 2004); Mayagna (Sumo) Awas Tingni Community v. Nicaragua, Inter-Am. Ct. H.R. (ser. C) No. 79, ¶ 149 (Aug. 31, 2001);
Centre for Minority Rights Development (Kenya) and Minority Rights Group International on behalf of Endorois Welfare Council v.

See Principles 1-4.

The Committee on Economic, Social and Cultural Rights [CESCR] identifies four types of extraterritorial legal obligations
to promote and protect economic, social and cultural rights, including: 1) refrain from interfering with the enjoyment of human rights in
other countries, 2) take measures to prevent third parties (e.g. private companies) over which they hold influence from interfering with
the enjoyment of human rights in other countries, 3) take steps through international assistance and cooperation, depending on the
availability of resources, to facilitate fulfillment of human rights in other countries, including disaster relief, emergency assistance, and
assistance to refugees and displaced persons, and 4) ensure that human rights are given due attention in international agreements and that
such agreements do not adversely impact upon human rights. See e.g. CESCR, General Comments 15: The Right to Water (Art. 11 and
1999); and General Comments 12: The Right To Adequate Food (Art. 11), E/C.12/1999/5, at 36, 37 (May 12, 1999).

See e.g. IBRD Charter Establishing the Forest Carbon Partnership Facility [FCPF Charter], May 11, 2011, art. 3, § 3.1.d.
(stating that the FCPF’s operations must comply with the Bank’s safeguard policies, taking into account indigenous peoples’
participation in decisions that may affect them and respecting their rights under national law and applicable international obligations).

This is one of those situations where the pro homine principle applies. In virtue of this principle, when interpreting human rights obligations, the interpreter should adopt the most protective reading when it comes to recognizing the extent of protected rights and, simultaneously, that it should opt for the most restrictive reading of provisions intended to suppress the exercise of specific human rights. Monica Pinto, El Principio pro homine. Criterios de Hermenéutica y Pautas para la Regulación de los Derechos Humanos [The Pro Homine Principle. Interpretative Means and Guides for the Regulation of Human Rights], in LA APLICACIÓN DE LOS TRATADOS SOBRE DERECHOS HUMANOS POR LOS TRIBUNALES LOCALES [THE ADJUDICATION OF HUMAN RIGHTS TREATIES BY DOMESTIC COURTS], 163 (Martin Abregú and Christian Courtis, eds., CELS, Editores del Puerto, 1997).
